EXPERIMENT 06

Aim : Create a Java Bean for Employee information (EmpID, Name, Salary, Designation and Department).

Step1. Create a Employee.java and EmployeeMain.java class

Step2. Go to Employee.java and write the code:-

```
public class Employee {  
    private int empld;  
  
    private String name;  
  
    private double salary;  
  
    private String designation;  
  
    private String  
department;
```

Raj Kumar Goel Institute Of Technology, Ghaziabad

```
// Default constructor
```

```
public Employee() {  
  
}
```

```
// Parameterized constructor
```

```
public Employee(int empId, String name, double salary, String  
designation, String department) {
```

```
    this.empId = empId;
```

```
    this.name = name;
```

```
    this.salary = salary;
```

```
    this.designation = designation;
```

```
    this.department = department;
```

```
}
```

```
// Getter and setter methods
```

```
public int getEmpId() {
```

```
    return empId;
```

```
}
```

```
public void setEmpId(int empId) {
```

```
    this.empId = empId;
```

```
}
```

Raj Kumar Goel Institute Of Technology, Ghaziabad

```
public String getName() {  
    return name;  
}  
  
public void setName(String name)  
{  
    this.name = name;  
}  
  
public double getSalary() {  
    return salary;  
}  
  
public void setSalary(double salary) {  
    this.salary = salary;  
}  
  
public String getDesignation() {  
    return designation;  
}
```

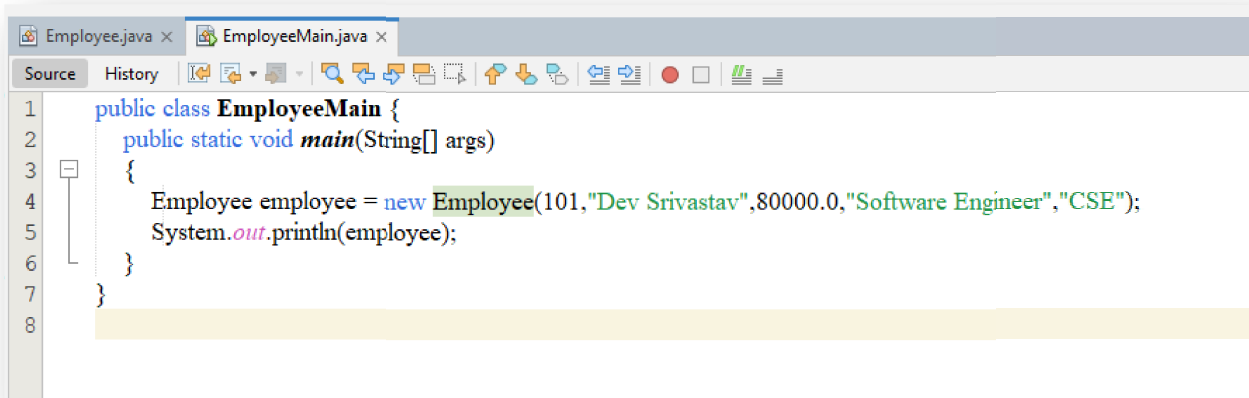

Raj Kumar Goel Institute Of Technology, Ghaziabad

```
public void setDesignation(String designation) {  
    this.designation = designation;  
}  
  
public  
String getDepartment() {  
    return department;  
}  
  
public void setDepartment(String department) {  
    this.department = department;  
}  
  
// Overriding toString() method for better representation  
  
@Override  
public String toString() {  
    return "Employee{" +  
        "empId=" + empId +  
        ", name=" + name + "\" +  
        ", salary=" + salary +  
        ", designation=" + designation + "\" +
```

Raj Kumar Goel Institute Of Technology, Ghaziabad

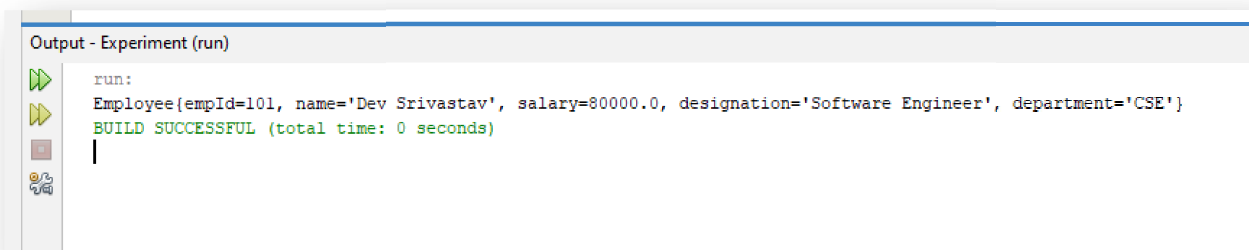

```
        ", department=" + department + "\" +  
        '};  
    }  
}
```

Step3. Go to EmployeeMain.java and write the code:-

```
1 public class EmployeeMain {  
2     public static void main(String[] args)  
3     {  
4         Employee employee = new Employee(101, "Dev Srivastav", 80000.0, "Software Engineer", "CSE");  
5         System.out.println(employee);  
6     }  
7 }  
8
```

OUTPUT:

```
Output - Experiment (run)  
run:  
Employee{empId=101, name='Dev Srivastav', salary=80000.0, designation='Software Engineer', department='CSE'}  
BUILD SUCCESSFUL (total time: 0 seconds)
```
